Q1: Does the BMS have low temperature charging disconnect? Yes, our BMS has low temperature protection cut-off function to protect the battery from low temperature damage and extend its life.

We recommend using a lithium iron phosphate 4-string (14.6V) charger to charge the battery. Alternatively, you can also charge the battery using photovoltaic solar panels through MPPT or use an inverter with a built-in AC to DC charging function.

A BMS (Battery Management System) is responsible for monitoring and protecting the battery. It safeguards against low or high voltage, low or high temperatures, and detects short circuits. The BMS ensures safe operating conditions for both the battery cells and the user. It also helps maintain cell balance during charging cycles, ensuring the overall quality and efficiency of the battery pack.
