As subject matter experts, we provide only objective information. We design every article to provide you with deeply-researched, factual, useful information so that you can make informed home electrification and financial decisions. We have:

Incorporated third-party data and information from primary sources, government agencies, educational institutions, peer-reviewed research, or well-researched nonprofit organizations.

We won't charge you anything to get quotes through our marketplace. Instead, installers and other service providers pay us a small fee to participate after we vet them for reliability and suitability. To learn more, read about how we make money, our Dispute Resolution Service, and our Editorial Guidelines.

As of January 2022, the average cost of solar in the U.S. is \$2.77 per watt - which comes out to \$22,160 for an 8-kilowatt system. That means the total cost for an 8 kW solar system would be \$16,398 after the federal solar tax credit (not factoring in any additional state rebates or incentives).

To give you a sense of the real prices solar shoppers are paying for 8 kW solar energy systems across the United States, we analyzed solar quotes from the EnergySage Solar Marketplace. Homeowners who join EnergySage can review and compare offers from multiple solar installers to find the right home solar panel system at the right price.

The federal tax credit significantly reduces costs even if you live in an area without additional solar incentives or rebates. Either way, reviewing offers from multiple solar companies will ensure you get the best price for your solar panel system. Homeowners who compare solar offers on the EnergySage Solar Marketplace can save 20 percent or more by evaluating multiple solar options from different companies.

While these numbers offer guidance for homeowners beginning the solar shopping process, remember that many factors determine the cost of your solar energy system. For example, if you want high-efficiency equipment or need special accommodations for a complicated roof, your system cost may be higher than the average. If you receive a quote from a solar company significantly higher or lower than the range for an 8 kW solar system in your state, ask the installer for an explanation - a reputable solar company will walk you through their proposal to you in detail.

It shouldn't surprise you to hear that the amount of sunshine where you live is the most important factor determining how much electricity your solar panels produce. If you install an 8 kW solar panel system on your roof in Las Vegas, you'll generate about 30 percent more electricity than if you installed the same system on a roof in New York City. However, that doesn't mean you have to live in Nevada for solar to be a good option for your home. Solar is a wise investment for everyone and can benefit homeowners with high electricity bills.

8kw solar system price

In the table below, we have collected estimated average electricity production numbers for 8 kW solar energy systems in cities across the United States. For comparison, the average U.S. household uses 893 kilowatt-hours (kWh) a month, a total of 10,715 kWh per year. We used PV Watts, a National Renewable Energy Laboratory tool, to develop these electricity output estimates.

Ready to get started? When you join the EnergySage Solar Marketplace, you can compare offers from multiple solar companies to get the best price on your solar installation. EnergySage offers comprehensive, easy-to-understand comparison tables that make it easy to review all of your equipment options and financing offers, as well as solar company reviews. When you compare multiple solar quotes, you can feel confident that you're making the smartest investment possible for your home.

Electric bills will continue to grow as we move toward electrifying homes, switching to EVs, and remote work. Don't worry, though - solar panel systems are getting bigger, too. More and more homeowners are getting quotes for 8 kilowatt (kW) solar panel systems to cover the costs of their electric-intensive lifestyle.
