

Abu Dhabi grid modernization

Abu Dhabi grid modernization

Modernization is driving unprecedented investment in grid infrastructure upgrades, innovative technologies and renewable energy sources. We're at the forefront, leading the charge to upgrade electricity grids around the world, helping to make them more efficient and resilient.

Our experience in the planning, design and delivery of high-voltage transmission lines, cables and substations is extensive and global. We excel in both greenfield and brownfield transmission and distribution projects, including upgrades, expansion and interconnection. And we navigate complex challenges to deliver robust power systems.

The electricity grid stands as the backbone of the energy transition, playing a critical role in global decarbonization. Through our grid modernization efforts, we help clients and stakeholders work towards a sustainable future alongside lower carbon emissions in the power sector.

Our services span siting, feasibility assessment, environmental impact assessment and permitting, to community consultation, outage planning, engineering, procurement, program and project management and construction services.
