

Altairnano bms service tool

It's "designed as an open platform to support engineering innovation and creativity, providing a test bed for the evaluation and application of advanced lithium-ion battery technology for prototypes, new application development, and for improving performance and reducing cost for existing applications"

-->

Nano power a.s. was established in 2014 as Altairnano's dedicated distributor of battery modules and partner in Europe. Then we have focused on integrating the Altairnano's battery modules into the complete battery systems and we have started to offer plug-and-play battery solutions with BMS and cooling. Currently, with a 5 years of experience and hundreds of applications in an electric and hybrid public transport vehicles all over Europe, we are one of the leading companies in LTO battery system integration.

The Application Kit is designed as an open platform to support OEM design and system engineering initiatives providing an inclusive test bed for the evaluation of lto batteries and Altairnano advanced lithium-ion battery technology for the use in prototype development, in new technology design and for improving application performance and cost of ownership.

Altairnano advanced battery modules are a cost-effective solution for transient power applications with demanding duty cycles that require abuse tolerance, safety and long operational life.
