

Best lithium batteries for rv

Best lithium batteries for rv

Lithium batteries last longer than their lead-acid counterparts. So if you want a reliable battery to keep your appliances running for your next decade of boondocking, you'll want to consider all of your lithium RV battery options.

But pay close attention to what we liked and didn't like about each battery and then consult our Buying Guide for direction on how to compare and contrast these battery options.

Because of this, you should avoid connecting this battery in series with batteries from other brands, as this can result in battery damage and a compromised lifespan.

It also requires little to no regular maintenance and offers a shelf life in excess of one year. For reference, most lead-acid batteries have a maximum shelf life of just six months.

For the snowbird RVers out there that prefer to spend most of their time in hot climates, the AIMS 12V 100Ah LiFePO₄ battery offers one of the widest operating temperature ranges of any battery on the market. It also boasts unsurpassed high-temperature performance.

With it being rated for this high number of discharge cycles, this battery should easily last up to 10 years and it comes with a three-year manufacturer defect warranty.

Furthermore, it includes a built-in battery management system that protects it from short circuits, overheating, overloading, and high or low discharge without the battery suffering damage or having its lifespan compromised.

If you like to stay up-to-date on how your battery is performing, you'll love the optional monitoring screen that you can purchase with the Renogy Li 12V 100Ah Smart LiFePO₄ battery.
