

Compare apc ups models

I have the opportunity to purchase an APC Back-UPS Pro 1500 or an APC Smart-UPS. The main difference I've noticed between the two is that the Smart-UPS offers a pure sine wave.

When compared to the BN1500M2 and BX1500M, the BR1500MS comes with a wider input voltage range for main operations, more battery charge power, more battery volt-amp-hour capacity, longer run time for load in addition to better coverage when it comes to lifetime equipment protection policy.

In addition to the main uninterruptible power supply, each product also comes with a coaxial cable, USB cable and user manual. The BX1500M also includes a RCBO.

The BN1500M2 and BR1500MS have the same output connections as both come with six NEMA 5-15R battery backups and four NEMA 5-15R surge protections. The BX1500M includes five each of the NEMA 5-15R battery backup and four NEMA 5-15R surge protection.
