

Doha battery performance

Axess power shares a few facts with all our clients on a general note helping them know the advantages and disadvantages of the available AGM Batteries in the market. Our battery trading success is attributed to the knowledge we gathered over the years and we feel that it is our responsibility to share this information with the public.

Safety aspect: AGM are safer than gel batteries because their electrolyte solution is absorbed in a glass mat which assures zero spillage over Gel batteries where the electrolyte is suspended in a gel.

Peak Voltage Performance: AGM batteries perform well at higher voltages and also during voltage fluctuations than the Gel batteries which are very sensitive to voltage input. This fact gives AGM batteries a better stability factor than the gel batteries
