

Dushanbe battery testing

Dushanbe battery testing

Arbin DCIM, cutting-edge technology and an innovative alternative to the traditional ACIM technique for measuring battery impedance, uses Galvanostatic AI Prediction Modeling Methods provide distinct advantages without additional equipment is required, shorter test times, and it maintains accuracy comparable to ACIM.

Arbin's RBT-Cell Series combines high-precision measurements with regenerative technology to reduce the overall energy cost and enables researchers to generate reliable and repeatable data.

Arbin understands the vital role energy storage plays in our everyday life and its importance to our future. This is why Arbin works hard to provide the best service and testing equipment as a tool for researchers and industry.

Arbin innovation can accurately measure Self-Discharge Current in a short time, it also avoids disturbance of battery electrochemical balance because the applied small current is constant without being affected by temperature change.

Cutting-edge technology and an innovative alternative to the traditional ACIM technique for measuring battery impedance, uses Galvanostatic and AI Prediction Modeling Methods provide distinct advantages without additional equipment is required, shorter test times, and it maintains accuracy comparable to ACIM.

SDCM is essential for evaluating a battery's state of health, predicting its performance, and estimating its lifespan. We have revolutionized this method, making it significantly faster and more accurate while lowering equipment requirements.

Arbin Patented(US11933860B2) SPT technology arranges cells with parallel and serial connection, each cell has dedicated monitoring circuit (relay and sample resistor) with it.

This structure not only lets bulk inlet current naturally distribute into each cell based on its real capacity, but also allows minor current flow among paralleled cells so that they can be self-balanced.

This plot illustrates the difference between an Arbin battery tester and another leading manufacturer. The first of the two distinct dips in the plot may have been missed using inferior test equipment. While many companies try to sell the same legacy equipment for over a decade, Arbin has been hard at work improving our designs to meet future industry demands.
