

Electric vehicles evs malawi

Speaking during the launch on Friday, Sky Energy Africa founder and Managing Director Schizzo Thomson said the enterprise is a significant stride in the realm of sustainable transportation.

He said the EVs would not only address Malawi's fuel scarcity concerns but also make strides in reducing air pollution and carbon emissions that contribute to climate-related disasters.

"We have taken a pioneering step towards a sustainable future, showcasing our commitment to providing diverse and cutting-edge solutions for eco-conscious transportation," Thomson said.

He underscored the importance of embracing innovative technologies that not only enhance the quality of life but also align with global efforts to combat climate change.

"With its fast-charging capabilities, the EV can be fully charged within hours, making it a convenient and efficient choice for urban and suburban commuting," he said.

He said the incorporation of a dual charging system in the EV empowers customers with the flexibility to conveniently charge the vehicles at home using standard charging outlets, ensuring hassle-free daily use.

"In the 2023/24 national budget, the government removed taxes on the importation of EVs and their charging systems, a clear demonstration of its commitment to promoting sustainable transportation options and encouraging the adoption of these vehicles," he said.

The minister encouraged private sector participation and collaboration in the EV market, emphasising the potential for job creation and the development of a sustainable EV ecosystem in the country.

This initiative is one of the many ways in which UNDP is working to support the transition to a more sustainable energy future. UNDP continues to provide technical assistance to governments and businesses, supporting the deployment of renewable energy technologies.
