

Electricity market trends vientiane

renewable energy in the energy system has increased significantly, mostly due to solar energy (solar PV); meanwhile, wind power is also on the rise. Since 2019, Vietnam has outpaced most...

This study discusses electricity market development in Vietnam, focusing on key achievements and future possibilities. The empirical analysis involves the construction of ESSI, a composite indicator for the security of the electricity supply for Vietnam.

This study discusses the process of electricity market development in Vietnam with a focus on key achievements and future perspectives. The empirical analysis attempts to construct a composite indicator for the electricity supply security (ESSI). Specifically, principal component analysis (PCA) is performed based on eight normalized variables ...

VIETNAM POWER MARKET IN BRIEF - INSTALLED CAPACITY. In 2022, there are 4 power plants that directly participate in the electricity market, with a total installed capacity of 2889 MW; bringing the total number of power plants directly participating in offering prices on the electricity market to 108 plants.

Energy landscapes in Asia and other regions are currently undergoing a transformation aimed at increasing the share of clean energy sources. This article analyzes and forecasts the electricity demand in Vietnam, examining existing constraints that necessitate the shift from coal to renewable energy sources.

Institutional subscriptions

In 2011, the Vietnam Competitive Generation Market (VCGM) was established as a pilot, ahead of the planned privatisation of EVN generation companies, followed by full operation in 2012.
