

Electricity meter box outside house

Electricity meter box outside house

Electric meter box replacement costs \$500 to \$2,100 on average, depending on the meter size, location, installation complexity, and code requirements. New outside electrical meter box prices are \$50 to \$750, depending on the amperage. Adding a separate electricity meter costs \$1,400 to \$4,700.

The cost to add a second electric meter is \$1,400 to \$4,700+, depending on the job size, complexity, and whether the power company splits the existing supply line or must run a new line.

Geographic location - Meter box replacement costs more in major cities with a higher cost of living. Building and electrical codes also vary by location and may impact the project requirements.

Project scope - Some areas require bringing everything up to code when replacing a meter box, which may involve replacing additional components, relocating the main disconnect outdoors, or updating the wiring.

New power line - Some meter box installations require running a new supply line from the utility pole. The cost to run power is \$5 to \$15 per linear foot for above ground service or \$10 to \$25 per linear foot for an underground line.

Electrical mast replacement costs \$500 to \$1,700 on average, including labor. The meter riser, or service mast, is rigid metal conduit attached to the siding and sometimes extending through the roof, connecting the utility power lines to the home's electrical meter.
