Since 2019, a new Building Code has been in force in the City, it contemplates new technologies and sustainable designs. All these guidelines have different instances of regulation, so as to gradually increase the requirements to achieve increasingly efficient buildings, aiming at self-sustainability as a means to achieve carbon neutral buildings.

Reducing energy consumption in homes is a necessary step on the road to mitigating climate change. To do this, it is necessary to reduce greenhouse gas emissions, thereby significantly improving the quality of life of Buenos Aires' citizens.

Energy talks aimed at the community, teaching programs for children from 3 to 9 years old, a virtual school for high school students and a web portal for building retrofitting.

LED technology allows lighting systems to be more sustainable and efficient, since, with its implementation, energy savings of more than 50% are recorded, and a 30% decrease in maintenance costs.
