

Energy management 13 kWh

Energy management 13 kWh

FranklinWH is a newer company in the U.S. home energy storage market, but it could soon be a household name. The WH stands for Whole Home, and the company is all about whole home backup. FranklinWH currently offers a single energy storage system model it calls Franklin Home Power system, or FHP for short, and it's been turning heads in the industry and the marketplace.

The FranklinWH costs more than some other batteries on the market at about \$17,500, but it offers more functionality than other options, including whole-home backup and generator charging.

The company says future "vehicle-to-home" functionality is on its product roadmap, which would allow homeowners with electric vehicles to power their homes with their cars. It's unclear whether the current aGate hardware can handle the functionality and the change will be software-only, or whether there will be a redesign or add-on for the aGate to make this functionality work.
