Founded in 2016, AMEA Power has assembled a leading team of global industry experts to deliver projects across Africa, the Middle East and other emerging markets.

As part of its commitment to economic and social development, AMEA Power works closely with local stakeholders to establish programmes that advance local communities which neighbour our renewable energy projects.

AMEA Power commissioned a 50MW solar power plant in Togo in June 2021. The Sheikh Mohamed Bin Zayed solar plant was delivered in record time, reaching commercial operation within 18 months of signing the Power Purchase Agreement, in spite of the COVID-19 pandemic.

Located in the Tafilah Governorate, the 51.75MW "Abour Power Wind Farm", which has 15 turbines, was awarded under the first round feed-in tariff (FiT). The project has a 20-year offtake from the National Electric Power Company (NEPCO) of Jordan. The project became fully operational in July 2021.

AMEA Power is constructing a 500MW solar PV project in the Aswan Governate in southern Egypt. Once commissioned, the solar power plant will be the largest solar PV project on a single site in the country. The project reached financial close in late 2022.
