Energy storage market analysis palau

Energy storage market analysis palau

N2 - This profile provides a snapshot of the energy landscape of Palau, an independent island nation geographically located in the Micronesia region. Over 97% of the island"s electricity production is dependent on imported fossil fuels, primarily diesel. Palau is aiming for 45% renewable energy generation by 2025, and is striving to overcome technological, financial, and institutional capacity challenges to meet this goal.

Over 97% of the island"s electricity production is dependent on imported fossil fuels, primarily diesel. Palau is aiming for 45% renewable energy generation by 2025, and is striving to overcome technological, financial, and institutional capacity challenges to meet this goal.

Many of us want an overview of how much energy our country consumes, where it comes from, and if we"re making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

In the selection box above you can also add or remove additional countries and they will appear on all of the charts on this page. This allows you to compare specific countries you might be interested in, and measure progress against others.

In the energy domain, there are many different units thrown around - joules, exajoules, million tonnes of oil equivalents, barrel equivalents, British thermal units, terawatt-hours, to name a few. This can be confusing, and make comparisons difficult. So at Our World in Data we try to maintain consistency by converting all energy data to watt-hours. We do this to compare energy data across different metrics and sources.
