Gas powered ev charger

Generac, which was founded in 1959, asserts on its website that it "was the first to engineer affordable home standby generators, along with the first engine developed specifically for the rigors of generator use, and is now the #1 manufacturer of home backup generators."

It sells power generation equipment, electrical storage systems, and other power products. According to Insider Monkey, Generac is the eighth-largest generator company in the world.

Wisconsin-based Generac's 48A /11.5kW Level 2 EV charger, which comes with a J1772 connector, can charge an EV in four to six hours. A NEMA-4 enclosure makes the unit rated for both indoor and outdoor residential installation.

Generac's EV charger will be carried at home improvement retailers, wholesalers, and hardware stores. Generac's dealers will also offer in-home consultations and installations to customers, who can visit Generac's website and fill out a contact form.

In May 2022, Generac debuted Geotab telematics for utilities and EV owners that provides utilities with monitoring data sent directly from a Geotab GO device installed in an EV's diagnostic port.

Generac also offers complete household battery storage and solar systems under the names PWRcell and PWRview. In November 2021, Generac acquired smart thermostat company Ecobee.

But a Generac investor filed a class action lawsuit earlier in January. It asserts, Bloomberg Law reported last week, that Generac "concealed important business metrics from investors, including the health of its legacy generator offerings and a component defect in a solar energy system":

The investor, the California Ironworkers Field Pension Trust, says Generac moved into the solar power and storage business to offset rivals' bites out of its generator sales. But that move depended on a partner that eventually faced bankruptcy.

UnderstandSolar is a free service that links you to top-rated solar installers in your region for personalized solar estimates. Tesla now offers price matching, so it's important to shop for the best quotes. [Click here to learn more and get your quotes.](#) -- *ad.

Roberto Baldwin spends a majority of his time talking people into buying either EVs or sport wagons with manual transmissions. After over a decade of covering technology in Silicon Valley, he's finally escaped to the glorious world of Car and Driver, where he'll be covering car tech in Silicon Valley.

"Generac's expansion into the EV charging market shows our dedication to advancement in energy management," said Kyle Raabe, executive vice president of Consumer Power at Generac. "With our extensive background in energy solutions and a network of nearly 9,000 certified North American dealers, we're poised to deliver an EV charging solution that sets a new standard for performance, reliability and user satisfaction."
