## Georgia electric vehicle range

Hyundai's \$7.6 billion EV plant in Georgia officially opens. After breaking ground on the site in October 2022, Hyundai Motor Group's Metaplant America (HMGMA) in Bryan County, GA, is now open.

Georgia is among the top ten largest markets in the nation for Electric Vehicle (EV) charging, and more drivers are turning to electric transportation for lower ownership costs and cleaner energy choices. By 2030, it is predicted that 50% of all new car sales will be electric vehicles.

PEVs come in three types: BEV, or Battery Electric Vehicle, is a total electric vehicle that stores electricity in batteries. PHEV, or Plug-in Hybrid Vehicle, primarily uses gasoline and is supplemented with electricity. EREV, or Extended-Range Electric Vehicle, primarily uses electricity and is supplemented with gasoline.

Providing the full electric vehicle supply chain is critical to a truly sustainable future, and Georgia is rapidly expanding across multiple segments: cathode and anode manufacturing, chemical and mineral solutions, battery manufacturing, metals and aluminum manufacturing, and battery recycling.

Inform yourself with a guide to everything about EV ownership in Georgia. From incentives and rebates to charging points and car laws, we've got you covered. Georgia, renowned for its rich history and southern charm, is now beginning to embrace Electric Vehicles (EVs). As the landscape of transportation shifts, you may have questions about ...

"After validating its production processes to ensure its vehicles meet Hyundai Motor Group's high standards, (the Savannah plant) has started initial production of customer vehicles ahead of schedule," a statement from Hyundai on Friday read (via The Atlanta Journal-Constitution).

Since 2018, over \$28 billion has been invested in Georgia to build electric vehicles, batteries, and other clean energy projects. The initiatives have already attracted over 36,000 new jobs in the state.

According to a study from the Center for Automotive Research, Hyundai's Georgia EV plant will help create over 58,200 new jobs. It will also attract over \$12.6 billion in investments.

The first vehicle to roll off the assembly line is Hyundai's updated 2025 IONIQ 5. The new Hyundai IONIQ 5 features even more range and a sharp new design. It even has an NACS charging port to access Tesla's Supercharger network. Hyundai said it will be available by the end of 2024.

Later this year, Hyundai will unveil its first all-electric three-row SUV, the IONIQ 9 (which was recently spotted testing in the US). The larger electric SUV will be built alongside the 2025 IONIQ 5 in Georgia.

## Georgia electric vehicle range

Hyundai said electric vehicles built at the plant will qualify for a partial \$3,750 federal tax credit. However, once the battery plant opens, Hyundai expects US-made EVs will be eligible for the full \$7,500.

With the 2025 model rolling out, Hyundai is offering significant discounts on 2024 models. You can use our link to view offers on the 2024 Hyundai IONIQ 5 at a dealer near you.
