

## Germany electric vehicle incentives

All this means that current and prospective drivers can enjoy a wide range of grants, tax incentives, and other benefits when purchasing an EV or charger in Germany. In fact, by taking advantage of the full scope of incentives, a Seat Mii Electric can be purchased for less than EUR11,000. Here is a quick overview of the main incentives available:

The only nationwide private EV charging incentive, according to our knowledge, is the following subsidy offered by the German state-owned development bank KfW-Bank:

In terms of public charging benefits, the German government aims to have 1 million charging stations in the country by 2030. To achieve this goal, The Federal Ministry of Transport and Digital Infrastructure has introduced an incentive program to encourage the roll-out of public charging stations.

The program is especially targeting small and medium-sized enterprises in the retail, hotel and catering industry, as well as small municipal utilities and local authorities. One of the prerequisites of the grant is the use of renewable energy for powering the charging stations. The subsidy covers up to 80% of the total costs for purchase and installation:

This list is by no means exhaustive. For instance, several other incentives are provided by energy companies for the purchase of their own EV chargers. Apart from that, new incentives may be introduced by specific cities, states or organizations in the future. As a result, you might also want to do a quick search on Google for "Ladestation Forderung [name of your city]" to make sure you don't miss out on any recent changes in policies.

**Purchase grants:** the following incentives are based on the extension of the Umweltbonus ("Innovationsprämie"), as per the economic stimulus package (German text), and apply for vehicles registered between 4 June 2020 and 31 December 2021:

In general, car dealers will fill out the grant application form for you. However, if you want to find more information on the grant and complete the application yourself, [click here](#) (German text).

**Leasing grants:** since 21 October 2020, the incentives for leasing an EV will depend on the contract terms. The minimum holding period for leasing is 12 months for a term of 12 to 23 months or 24 months for a term of more than 23 months. For terms of 6 to 11 months, the minimum holding period is 6 months.

**Used-car grants:** purchases of second-hand EVs and plug-in cars receive the same grant amounts as new EV purchases (see above), as long as they have been registered after 4 November 2019 and haven't already received the Umweltbonus subsidy before.

In 2015 the Electric Mobility Act (EmoG) came into effect with the aim of promoting electric mobility in Germany. Depending on the specific implementation of the law in each federal states and cities, EV drivers can enjoy the following benefits:

As part of both the new 2030 Climate Plan and the 2020 economic stimulus package, the German government has pledged funds and development rights to different areas of its transport system to reach the updated electrification goals.

Further federal initiatives in the field of electromobility, especially in relation to R& D, can be found here. For a detailed search on regional initiatives, it is best to use this federal government database.
