

Getting an electric car charging point

Getting an electric car charging point

Tip: if you don't have a driveway, you can still have an EV by making use of our extensive UK network of public and workplace chargers. If you live in a flat and need some help convincing your property manager or landlord to install electric vehicle charging in your apartment, use our letter template to kickstart the conversation.

Tip: Pod Point's standard installation includes up to 15 metres of black cable, which will be neatly clipped to the wall between the distribution board/electrical supply meter and the chargepoint.

Tip: The Pod Point Solo home EV charger is compatible with all plug-in electric vehicles, OZEV approved, and fully compliant with the government's latest smart charging regulations.

While you have to seek out permission, there's some good news. Renters and flat owners may be eligible for the OZEV grant, which can lower the cost of getting an EV charger by up to ?350. Find out more about the grant scheme and see the full list of eligibility criteria.
