

Google maps ev charger locations

Google maps ev charger locations

Charging stations for electric vehicles are not nearly as plentiful as gas stations. They can also be harder to spot from the road. Thankfully, Google Maps makes it easy to find chargers for your electric car.

Before we start looking for charging stations, you should tell Google Maps the type of plug your eco-friendly vehicle uses. This will ensure you only find compatible chargers for your vehicle.

This will bring up a list of results in your area. You can sort by Relevance or Distance, Open Now, Top Rated, and choose plug type---which we already did above.

The results themselves include a lot of useful information as well. You can see the charging speeds and how many charging stations are there. Tap the directions icon to begin navigating to the charger.

If you're already driving and you need to find a charging station, you can simply add a stop to your existing navigation route. It works in the same way as adding a gas station---or any other stop---while navigation.

The world may seem like it still favors gas-powered vehicles, but you don't have to be left out when it comes to Google Maps. Make sure you're taking advantage of all of Maps' features to maximize your trips.

A red icon for the Charging stations category can also appear next to icons for other categories. Your Engine type must be set to `"Electric"` in the Trip options for this icon to be visible.

We built Google Maps to help people get where they need to go no matter what mode of transportation they use. Our newest feature brings helpful information about electric vehicle (EV) charging stations to the Map, so you can be confident that your car will be charged and ready for your ride, wherever you're headed. Here's how it works:

A quick search for keywords like "ev charging" or "EV charging stations" will display the nearest supported stations. To help you make a quick decision about which station to use, we'll show you information about the business where the station is located, the types of ports available, charging speeds, and how many ports there are. You'll also see information about the station from drivers, including photos, ratings, reviews and questions.

Important: This article is only for Google Maps built into your car. Feature availability or functionality may depend on your car manufacturer or region and data plan.

You can get useful information for your electric vehicle on Google Maps. You can find your car's battery level on arrival, get important battery alerts, and find compatible charging stations.

When you search for a place on Maps, you'll find your car's estimated battery on arrival . Once navigation starts, your battery on arrival will continuously update as you drive.
