

Green solar energy reviews

Green solar energy reviews

When a review in our review database is published by someone who doesn't want their real name used, "Anon" (short for "Anonymous") is the default name given. Note that we still verify the reviewer's name and contact details before they can publish a review.

Green Solar Energy is Australian-owned and offers a variety of solutions to help customers lower their energy bills and consumption. It boasts an experienced team of technical experts who can deal with all the paperwork associated with buying solar panels to make the process as easy as possible.

Only the highest quality products are used by the company, which states that it does more than simply supply and install solar panels. Customers are asked to outline their requirements so the team at Green Solar Energy can come up with a solution for their needs.

Reviewers report paying: \$6,000 - \$10,500 for 6kW 8kW 10kW 13kW depending on hardware choice and installation difficulty (how is this calculated?)

Before reporting a review please read through our reporting guidelines to see how we evaluate and moderate reported reviews. If you are a solar installer please read our legal threats policy.
