A day after a massive nationwide blackout left millions of Cubans without electricity, authorities were trying to reconnect the island"s integrated energy system Saturday with gradual and limited success. (AP Video/Ariel Fern?ndez and Milexsy Dur?n)

Cuba"s electrical grid went offline Friday after one of the island"s major power plants failed, the energy ministry said. The announcement came hours after the government announced that one of the nation"s main thermoelectric plants, La Antonio Guiteras, had ceased operations at about 11 a.m. local time, with authorities saying it was only offline temporarily.(AP Video/Ariel Fern?ndez, Osvaldo Angulo and Milexsy Dur?n)

HAVANA (AP) -- Millions of people in Cuba were left without electricity for two days after the nation"s energy grid went down when one of the island"s major power plants failed. The widespread blackout that swept across the county was the worst in years.

Authorities have restored power to some people in Cuba's capital, where 2 million people live, but much of Havana has remained dark. The impact of the blackout goes beyond lighting, as services like water supply also depend on electricity to run pumps.

About half of Cuba was plunged into darkness on Thursday evening, followed by the entire island on Friday morning after the failure of the Antonio Guiteras thermoelectric plant in Matanzas Province east of Havana.

Havana electricity

Even in a country that for decades has been accustomed to frequent outages amid a series of economic crises, the grid failure was unprecedented in modern times, aside from incidents involving powerful hurricanes, such as one in 2022.
