S.S.C, N.S., S.S. and S.-L.H. have filed a US provisional patent (No. 63/625,727) through the University of California, Berkeley (Disclosure BK-2024-082) titled "Giant Energy and Power Density Microcapacitors via Ferroic Order Superlattices".

The energy storage density in HZO thin films was optimized through a three-pronged approach: (i) field-driven NC optimization through ferroic phase engineering in ~10 nm films (left), (ii) scaling up the field-driven NC behavior to ~100 nm through amorphous-templated superlattices (lower right), and (iii) integration of NC superlattices into 3D Si capacitors to increase the energy storage density per footprint area (upper right).
