

Hyundai plug in hybrid charger

Hyundai plug in hybrid charger

The table below shows the estimated time to charge your Tucson from empty to full. For rapid charging, we show the time to charge from 20% - 80%, as charging tends to slow outside this range to protect the battery.

You can charge your Hyundai Tucson PHEV conveniently at home, plug-in when you arrive at work or top up when you're out and about at locations including supermarkets and public car parks.

The cost of charging your car will vary between home, work and public chargepoints (below are our estimates). Charging on the Pod Point Network can be accessed through the Pod Point App.

An affordable seven-seater plug-in hybrid SUV? Now there's something you don't see every day. If you've got a big family or lots of luggage, the Hyundai Santa Fe PHEV is the car for you. Like most heavy family SUVs, it isn't designed to be particularly exciting to drive, but what it lacks in thrills it makes up for with practicality and a decent electric-only range of 36 miles - according to Hyundai - which will more than cover most day-to-day driving.

The table below shows the estimated time to charge your Santa Fe PHEV from empty to full. For rapid charging, we show the time to charge from 20% - 80%, as charging tends to slow outside this range to protect the battery.

You can charge your Hyundai Santa Fe conveniently at home, plug-in when you arrive at work or top up when you're out and about at locations including supermarkets and public car parks.

Wallboxes for home charging typically provide up to 22 kW. The on-board charger converts AC into the DC energy that is stored in the vehicle's high voltage battery. Plugging into a regular home socket also charges with AC current.

Just as there is a range of factors that affect the fuel efficiency of an internal combustion engine (ICE), the total electric driving range will be affected by the size of the battery, your driving style, the outside temperature, any passengers you are carrying and more.

By installing a home charging station you can significantly reduce charging times compared to charging at a domestic socket. A home charging station can be wall-mounted (in a garage) or stand-alone (outside). Your Hyundai dealer will help you plan the setup that's right for you. Charging an electric car feels like charging a mobile phone - plug in overnight and start your day with a charged car.

You can talk to your landlord to get permission to install a wallbox in the garage or parking lot of the building. You might have to cover the costs partially or completely on your own, but government grants may be available as well. Alternatively, you can search for public charging stations near your apartment, e.g. in front of supermarkets or public buildings.

Once you have chosen a charging network (it's a little like choosing mobile service provider), your 5 years free Hyundai LIVE Services subscription will show you real-time charging station information such as location, charger and connector types and availability. So you will never have to waste your time worrying about running out of battery.
