Reliable electricity is the backbone of modern healthcare, but in Goma, Democratic Republic of the Congo (DRC), energy shortages are limiting access to life-saving equipment like oxygen concentrators.

Power Africa and our partners at the University of California Berkeley and the Research Center for Humanitarian Aid are working to address health inequities in the DRC with cutting-edge research, strong local partnerships, and a commitment to decentralized renewable energy solutions.

Since 2013, Altech, a Congolese-owned solar home system company, has been lighting homes in some of the remotest parts of the Democratic Republic of the Congo (DRC).

The Government of the Democratic Republic of Congo (DRC) tasked its National Rural and Peri-urban Electrification and Energy Services Agency (ANSER) to meet the ambitious goal of connecting an additional 15 million people to electricity by 2025.

In 2020, Power Africa awarded Bboxx with a grant to introduce pay-as-you-go (PAYGO) solar energy solutions to DRC's Ituri and North Kivu provinces. The Power Africa investment enabled Bboxx to open three new retail outlets in the area, train approximately 100 technicians and sales agents, and sell more than 3,000 solar home system (SHS) kits. Through these efforts, nearly 15,000 people now have first-time reliable and affordable electricity access.
