Manufacturing energy storage eritrea

UK company Solarcentury has commissioned two solar-storage-diesel mini-grids in rural communities in Eritrea that are far away from the grid and have relied purely on diesel power until now.

The hybrid power systems at Areza (1.25MW) and Maidma (1MW) took eight months to build, with a combination of solar PV, lithium-ion batteries from US firm Tesla, and backup diesel generators from Caterpillar.

The sites, providing 24/7 and cheaper power to 40,000 people and businesses, will be operated by the Eritrean Electricity Company, whose staff have been trained by Solarcentury.

The project was funded by the Eritrean Government with support from the European Union Delegation to the State of Eritrea and the United Nations Development Programme.

Solarcentury project manager, Theo Guerre-Canon, said: "The community are at the heart of this project. Our hope is that access to reliable electricity will support wider economic growth in the region, and social development. For example, there's a clinic in Areza that will now benefit from uninterrupted electricity. The Eritrean project presents a model for rural electrification, and Solarcentury is in discussions about similar projects across Africa."

Tesfai Ghebrehwet, director of Renewable Energy, Ministry of Energy and Mines, added: "Solarcentury were very focused, and kept the project progressing at a quick pace in remote conditions. The Ministry of Energy and Mines are very pleased with the process and results."

When the project was first announced, our sister site at Solar Media, PV Tech, spoke to Daniel Davis, director of hybrid power systems at Solarcentury, about the opportunities and challenges in off-grid renewables in Africa.

The African Development Fund is helping the Eritrean government to deploy a 30 MW solar facility in Dekemhare, Eritrea. It has launched a tender to seek consultants for the project.

The African Development Fund (ADF) is helping Eritrea's government to develop a 30 MW solar plant in Dekemhare, in the central part of the African country. The ADF is currently seeking consultants for the project through a tender.

The project will include an unspecified amount of battery storage and a 66 kV transmission line. The government chose the proposed location for its relatively cool temperature, the elevation, and the presence of existing infrastructure that could connect the array to the national grid. Prospective consultants have until Feb.

23 to submit their proposals.

The Eritrea National Energy Policy, which was issued in 2018, aims to increase the electrification rate across the country. According to the International Renewable Energy Agency (IRENA), Eritrea had just 24 MW of installed PV capacity at the end of 2021.
