

Mauritius data center energy storage

The state-owned Central Electricity Board of Mauritius has opened a tender for consultants to assist with the implementation of four 10 MW solar plus storage facilities.

Both international and Mauritius-based companies are invited to apply. Applications must be delivered by post on or before 10 July, with full details available to download on CEB's website.

Mauritius had 108 MW of deployed solar at the end of last year, according to figures from the International Renewable Energy Agency. This latest tender follows a request for consultants to support a 15 MW solar project, which ran in May.

Your personal data will only be disclosed or otherwise transmitted to third parties for the purposes of spam filtering or if this is necessary for technical maintenance of the website. Any other transfer to third parties will not take place unless this is justified on the basis of applicable data protection regulations or if pv magazine is legally obliged to do so.

You may revoke this consent at any time with effect for the future, in which case your personal data will be deleted immediately. Otherwise, your data will be deleted if pv magazine has processed your request or the purpose of data storage is fulfilled.

The four projects will have a combined capacity of 100 MW and will be constructed by independent power producers, the tender document says, without providing further technical or financial details. Interested consultants have until May 19 to submit their offers.

In April, Landscape Mauritius, a government-owned property developer, issued a tender for 10 MW of solar capacity in La Valette, Bambous, a town on the northwestern coast of Mauritius.

According to the latest statistics from the International Renewable Energy Agency (IRENA), Mauritius had 110 MW of installed capacity by the end of 2022. The nation did not install any new capacity last year, according to IRENA.

In March 2022, the Central Electricity Board (CEB) of Mauritius issued two different tenders for the deployment of 140 MW of solar-plus-storage capacity. The government of Mauritius has also been supporting distributed solar through net metering and rebate schemes.

The Central Electricity Board (CEB) of Mauritius has launched two different tenders for the deployment of solar-plus-storage systems with a combined capacity of 140 MWp. The authorities have not yet disclosed the separate capacity of the storage systems in the two projects.

The CEB of Mauritius, operating under the Ministry of Energy and Public Utilities, issued the two procurement calls for renewable energy in the form of a request for proposals (RFP). The first tender covers the development, financing, and implementation of a 100 MW solar project, under a long-term power purchase agreement (PPA). Interested bidders can apply until June 22, 2022.

The second tender relates to the procurement of power from a 40 MW renewable hybrid facility comprising a solar and battery energy storage system. Interested independent power producers are required to submit their bids before June 15, 2022.
