

Niue increased renewable energy penetration

Niue increased renewable energy penetration

Tagelagi told RNZ Pacific that Niue's contribution to global warming is one-thousandth of a percentage point (0.0001%) and they are already halfway to achieving their renewable energy target of 80 percent renewable by 2025.

"If anything, we should be rewarded in a way in support...for adaptation in protecting the livelihoods of our people, safeguarding their homes and climate proofing the public infrastructure, and preparedness for any of these extreme events."

"The best thing or the best call that everyone should be calling for is the lesser use of fossil fuel. That's the reality of it.. cause if there's no fossil fuel, and the renewable energy, say there's no sun, what is your backup?"

Responding to Niue's position on Australia's plans to host the UN's climate change conference - COP31 - in 2026, Tagelagi said Australia would need to "share the COP with the Pacific".

"We want our brothers and sisters outside of the Pacific to see what we have, showcase what have, to have a better perspective of how far we have to travel, and all the meetings are in their end. It takes a toll on our officials.

The proposed TA will support climate adaptation and enhance disaster resilience in Niue's energy sector through capacity-building activities aimed at improving the efficiency and reliability of power network operations. It will also promote greater integration of renewable energy, helping the Government of Niue work toward its target of 80% renewable energy by 2025.

The Asian Development Bank (ADB) is committed to achieving a prosperous, inclusive, resilient, and sustainable Asia and the Pacific, while sustaining its efforts to eradicate extreme poverty. It assists its members and partners by providing loans, technical assistance, grants, and equity investments to promote social and economic development.
