

Off grid inverter for stable power supply

Off grid inverter for stable power supply

An off-grid inverter's primary function is to convert DC electricity into useable AC which can be used by our homes appliances. However, we are about to show you that the best all-in-one off-grid inverters of 2024 can do much more than that.

We've selected 9 off-grid inverters from 1.3kW to 12kW to satisfy all sorts of usage from the small outback cabin with a refrigerator and TV to large off-grid homes with multiple AC units.

All you need to do is plug in your batteries and solar panels. The batteries can be charged by the solar panels or an external AC source (generator, utility grid) as a backup.

The GroWatt SPF 3000TL is a good entry level off-grid inverter. It includes a solar charge controller and a high efficiency pure sine wave inverter (93%). You can configure it to accept grid/backup generator (AC) or solar power as a priority.

Eco-worthy is a white label brand for inverters. This cheap inverter is the perfect choice for a DIY system. It combines an efficient MPPT solar charge controller and a pure sine wave inverter.

In addition, there are 3 charging modes: solar only, backup priority, solar + backup. It is all programmable and will switch between one mode to another in function of the available power source to ensure seamless electricity supply.

The EASYSOLAR-II is the latest update of Victron's EasySolar series. A high-quality all-in-one inverter that includes an efficient MPPT solar charger (up to 5800W of PV power) and a smart inverter.

The EasySolar-II can be connected to the utility grid and to a backup generator at the same time. You can easily setup the power backup priority (grid or genset) and the inverter will automatically start the generator if needed.

Sol-Ark is an American company that manufactures high quality inverters. The Sol-Ark-SA-5K combines a highly efficient solar charger and a pure sine wave inverter in a pre-wired solution.

This product is packed with innovation, it includes 2 of the most efficient MPPT solar chargers (99.9%) to reach a whopping 10kW of PV power. It is also versatile, as it could work in different modes, such as: full off-grid, grid sell, meter zero, time of use and peak shaving.

Flexibility and reliability are the key characteristics of this all-in-one off-grid inverter integrates two high voltage MPPT solar charge controllers that enable PV modules to be connected in series of one or two strings.

Off grid inverter for stable power supply

The SA-12K is the most powerful off-grid inverter developed by SolArk. With 9kW, it has no problem to power a fully off-grid house. It features 2 MPPT solar charge controllers that allow up to 13kW of solar panels. This is more than enough to cover the daily needs of the average American house.
