

Photovoltaic pv systems bahamas

Photovoltaic pv systems bahamas

With the initial evaluation we're able to determine payoff period and ROI. The solar systems we install typically have a payback between 4-7 years and a 18-20% return each year.

Noel and his crew spent the extra time necessary to make my solar installation come out right the first time. it was an easy process from start to finish. Everyone was very professional and I highly recommend them.

The whole team over at Bahamas Solar really knows this business backwards and forwards, they made my customers installs simple and completions on time.

Going solar has never been easier. Here at Bahama Solar we take care of your project from start to finish. Offering full turn key systems for all residential and commercial operations. Serving all the Bahamas, from Nassau to the out islands. We offer customized solutions tailored to your specific needs.

For too long, high electricity prices and unreliable power have burdened Bahamian families, and held our country back - undermining our progress and prosperity.

Comprehensive upgrades to our country's transmission and distribution infrastructure, and switching from heavy and diesel fuels to solar power and natural gas, will create new efficiencies and reduce the price of electricity in The Bahamas. But it won't happen overnight - it will take time to upgrade our grid and to integrate cleaner energy. Yet many Bahamians need relief from high electricity bills right away. In July 2024, a new Equity Rate Adjustment will make bills more affordable for many Bahamian families now, as we transition to a new era in energy.

Who is affected? These changes only impact customers of the Bahamas Power and Light Company Ltd. and will not affect customers of other electricity providers in the country (Grand Bahama Power, RAV Utilities, St. Georges etc). What are the changes to the Base Tariff? The changes to the base tariff are set out in the table below:
