Photovoltaic pv systems kingston

Quantum Renewable Energy is a Kingston, Ontario based company that offers turnkey solutions for renewable energy needs. Experienced and reputable, we specialize in several areas of the rapidly growing renewable energy industry, including:

As a service-based business, we put our customers first. In order to offer our clients the most cost-effective and high-quality energy solutions, we deal directly with both domestic and foreign suppliers. We also pride ourselves on our dedicated, enthusiastic personnel. We are a knowledge-based company staffed by PV and solar thermal specialists, and use this expertise, along with cutting-edge technology, to provide our clients with outstanding service and optimal results.

At Quantum, our mission is to provide customers with access to affordable alternative energy sources. We all believe in the importance of renewable energy both for our planet's well-being and our client's financial bottom lines - and we are committed to spearheading the effort against climate change one system at a time. With your help, we can be part of a solution that brings about a greener earth and a healthier future.

Rick started Quantum in 2002 out of the basement of his home. He's grown the company from its early days of two employees to several crews. Throughout the expansion he has kept the focus on solar energy technologies, striving to be knowledgeable and provide excellent customer satisfaction.

Quantum started in 2002 as a small two-person company. We were dedicated to installing and servicing all types of solar energy systems. As the years went by, we grew in size and experience. Most of our current employees are graduates of the St. Lawrence College Renewable Energy ESET (Energy Systems Engineering Technician and Technology) Program. We strive to maintain a high level of knowledge through ongoing education in the renewable energy field. During the busy summer season, we expand to a crew of between eight and 14 technicians.

Quantum has extensive experience in small FIT installations (10 - 500 kW in size) ranging from central inverters, distributed string inverters, flat roof, sloped roof and ground mounted systems.

We have in-house resources to look after all aspects of the project. Quantum can supply a turnkey project with design, supply, engineering, install and commissioning, or as little as just the DC installation component.

The owner or principal of each business in HomeAdvisor's network (with the exception of Corporate Accounts) must pass a background check. Unfortunately, we cannot perform a background check on every employee of a business—the background checks are performed only on the owner or principal. As always, we recommend that you conduct your own research on the businesses you hire, including making inquiries directly with the businesses regarding their employee background check policies.
