Rabat solar energy companies

We give you the best choice through transparent, honest figures on returns for your PV installation, to help you choose the right system and technical solutions for your individual needs.

We use off-the-shelf parts (PV panels, batteries, bicycle frames and ebike motors) to create the lowest cost 4-wheel transportation device that does not require fuel. We designed it for at least 2 people + baggage with a daily commute of 50km using only solar energy collected as it sits parked all day in the sun. We promote it to off-grid communities in three ways : i) for mobility (fetch water, go to school, market, fetch the...)

We produce and commercialize a bio-flocculant in order to purify wells water in rural areas all over Africa. Our bio-flocculant is produced from a natural material which is Cactus. First, we offer a consulting service to our client to present and identify the water purification procedure, and we adjust the appropriate kit for their use, in the aftermath, we offer a proper monitoring.

Equipping roads and cars with devices. To generate electricity through the movement of cars. A plate with a coil and a magnet is installed under the car. In contrast to a plate with a coil and a magnet is installed on the road. Through the movement of the car, electricity is created in a mutual way. The energy produced inside the car is used to charge the battery and The energy produced on the road is used for backup charging stations and road lighting.
