

Residential solar bloemfontein

Residential solar bloemfontein

Ground-mounted solar panel system involves installing a metal racking system onto which the solar panels will be attached. The mounting system typically consists of metal posts that are anchored into the ground using concrete to ensure stability. The metal racking is then attached to these posts.

To keep your solar panels functioning at peak efficiency, we offer cleaning and maintenance services to keep them free of dirt and debris. This can improve performance by up to 20%

By partnering with Solar Panel Specialists, you leverage our unique strengths and industry-leading services to enhance your offerings, expand your reach, and drive customer satisfaction.

Congratulations! You've just found the preferred solar installer in Bloemfontein, LEDmar Solutions. With more than 10 years' experience with solar systems, you can rest assure that our products and services are always at a very high standard.

LEDmar Solutions (PTY) Ltd has been providing solar solutions since 2013. We are solar installers for single and three phase systems in and around Bloemfontein. Whether you're looking for a grid-tied, hybrid or off-grid solar solution, we're here to assist. We only use quality inverters, solar panels, battery chargers and batteries from our trusted partners.

Solar energy is a free renewable resource, which is harnessed from the sun to power homes, businesses, and gadgets. The solar energy is converted to electric energy to enable its use in electrical gadgets and other devices.

In our current society, most people are extremely dependent on the electricity generated by oil and coal, which both add to greenhouse gas buildup in the Environment.

Solar panels are becoming a more affordable and economically sound proposition for many South Africans, both on a residential and business level in order to keep electrical and electronic appliances and machinery operating during power outages, as well as to curtail expensive electricity costs, particularly in the operation of residential hot water geysers. Solar water heating, whilst being a major residential demand at this point, is just the start of further power demands. For more tips, see our solar panels specialists articles.
