Reykjavik solar energy jobs

The Iceland School of Energy is proud to see its graduates making a substantial impact across the energy sector, both in Iceland and globally. Our alumni work in diverse roles and industries, from managing energy production to leading sustainability initiatives and launching startups. This diversity showcases the versatility of an ISE education, preparing students to excel in various professional paths.

Utilities (30%): Working in roles such as Geothermal Production Managers, Power Distributors, and Electric Power Engineers, contributing to renewable energy projects in geothermal, solar, and hydroelectric power.

Professional, Scientific, and Technical Services (25%): Many serve as Environmental Consultants, Engineers, and Technicians, applying their expertise to technical and strategic projects.

Other Sectors (27%): Including business, banking, international affairs, software development, and utilities regulation, demonstrating the adaptability of ISE alumni.

Cari currently is a PhD student in the School of Science and Engineering at Reykjavik University. Her project focuses on machine learning and data fusion for geothermal reservoir characterisation and is conducted in close cooperation with Landsvirkjun and Orkuveita Reykjavíkur.

Sven is currently a PhD researcher within the 2060 project at the Institute for Integrated Energy Systems at the University of Victoria after having previously worked for CanGEA.

Samuel is a specialist with Landsnet, the Transmission Service Operator of Iceland. He represented Landsnet on the EU FP7 research project called "GARPUR". This is a large collaborative project on developing new probabilistic reliability criteria for national and multi-national electrical grids.

Almar is working in economic consulting within the energy sector. Activities include analysis of policy, regulation, and economic advice for governments and international donor agencies.
