

Riyadh energy storage economics

The King Abdullah Petroleum Studies and Research Center (KAPSARC) and Saudi Association for Energy Economics (SAEE) are proud to host the 44th IAEE International Conference in Riyadh from February 4-9, 2023.

For the first time, the IAEE is holding its prestigious annual international conference in the Middle East and North African (MENA) region, and it will provide an opportunity for government officials, institutional and corporate leaders, and renowned academics to address timely and relevant issues of the energy sector.

The event will be addressing critical topics under the theme "Pathways to a clean, stable, and sustainable energy future". By facilitating academic evidence-based solutions and providing a platform for productive dialogue and problem-solving capacities, the 44th IAEE International Conference will play a leading role in addressing the biggest challenges of our time.

IAEE International Conference 2023 is one of the world's most influential strategic conference programs - playing an important role in developing the thought leadership, direction and strategies that will shape the industry's response to the realities of the energy transition. The conference provides the opportunity for academia, the scientific community, industry, and government to assess the evolving energy landscape and explore ideas and strategies that will ensure long-term future success in a lower carbon future.

Conference organizers wish to use volunteers from Saudi universities in colleges and departments related to the aforementioned conference topics, economics and energy-related student clubs, if any, and others to assist in the process of addressing key speakers and interlocutors in conference sessions, as well as other logistical arrangements.
