

Sofia battery life

Sofia battery life

The design features a rose gold-tone stainless steel bracelet, full-round display and pave crystal top ring. Endlessly customizable to suit your life and mood, the Sofie features new digital dial designs that connect to and visually show your heart rate, making it easy to monitor and track.

Reducing screen brightness and the time it takes your phone to go to sleep are also easy ways to extend your battery life. Using an unofficial charger damages your phone True

The Michael Kors Access Sofie isn't a watch that's been designed for fitness. Just five minutes of wearing it will remind you of this. It's chunky, looks too smart to risk roughing up while running or at the gym, and just doesn't suit anything rugged.

That's reflected in its features. There's no onboard GPS so you're unable to get an accurate reading of your routes without your phone on hand. There's also no heart rate monitor, so you won't be able to see how your heart is performing while exercising.

Google Fit and Google Fit Workout are pre-installed, and reasonably useful. Google Fit shows how many steps you've taken each day, the distance traveled, and calories burned. While Google Fit Workout is perfect for tracking your reps on the rare times you might want to take this watch to the gym.

An IP67 water-resistant rating means you can be reassured that sweat or a brief rain shower isn't going to wreck your stylish watch, but you shouldn't take this swimming.

On our first day of use, which involved plenty of setup and trying out many apps, it only actually lasted about 7-8 hours. However, on a regular day, where you're only using it occasionally, around a day sounds about right.

It's not quite a full 24 hours but the idea of charging it at the end of the day, on your bedroom nightstand, feels about right to us. This isn't a watch you'll want to wear overnight anyway, due to how chunky it feels.

Jennifer is a roving tech freelancer with over 10 years experience. Having graduated from Swansea University with a degree in Media and Communication Studies, and later with a diploma from Staffordshire University with a post graduate diploma in Computer Games Design, she's written for a huge number of publications, including T3, FitandWell, Top Ten Reviews, Eurogamer, NME and many more.

Her main areas of interest are all things B2B, smart technology, wearables, speakers, headphones, and anything gaming related, and you'll find her writing everything from product reviews to buying guides and hunting down the latest coupon codes to save you money. In her spare time, she enjoys the cinema, walking,
