

Solar energy for the environment nicosia

In general, the answer is no, commercial photovoltaic systems cannot power a facility in the event of a power outage. However, if a consumer wants their commercial photovoltaic system to serve as a backup generator, they will need to add additional equipment to their commercial photovoltaic system, such as a battery bank and an inverter.

Yes, it most probably will. Nowadays, energy efficiency is a very important factor when purchasing a property. People want houses that can help them save money, and a photovoltaic system can do that. Therefore, an already installed solar panel system can definitely increase a property's value.

The lifespan of a commercial photovoltaic system in Nicosia is around 20 years. Of course, this depends on the care that is given to the solar panels throughout the years.

The decision to install a photovoltaic system in Nicosia is important and our team is here to help you throughout the process. With years of experience, we can assist you with the application process and all the paperwork that you will need.

Our consultants are responsible for finding the best and most effective photovoltaic system based on your energy needs and consumption and our team's experienced engineers can design your photovoltaic system based on the whole picture, your space, your budget and your energy needs.

With around 320 days of sun a year, Cyprus is a solar energy generation paradise. Take advantage of the weather in Cyprus and produce your own electricity to help yourself and the environment.

Do not worry about your solar panels' maintenance. We monitor all our installations to know about any damages or deficiencies and solve any problem right on time.

Invest in a photovoltaic system in Nicosia and achieve amortisation of the initial cost through savings on your electricity bills within a few years. A great investment for everyone.

The installation of solar panels is a Renewable Energy Source. Solar panels absorb sunlight and make solar energy into electricity. This is why solar panels are installed on roofs or on the ground where they can absorb direct sunlight.

Every application is different and the number of panels that are installed depends on the energy needs as well as the annual electricity consumption of each household, company etc. Moreover, the number of panels is proportionate to the kWp that the applicant chooses. In addition, the number of panels must be agreed on with a professional after an evaluation of the roof or ground where the panels will be installed.

This depends on the solar panel system you install and the energy it generates as well as the energy you consume. Of course, our professionals will assist you before you choose your photovoltaic system so that it meets your needs and helps you save a lot of money on energy use. The amortization of your investment is achieved within a decade.

Yes, they can. Solar panels work even if there is no sun some days. Of course, they absorb more sunlight and produce more energy on sunny days, however, they also work on cloudy days when there is no direct sunlight.
