

Solar energy sweden

Solar energy sweden

Our vision is for individuals and companies to have access to solar energy in an efficient, smart, and economical way, where Swedish solar energy companies should be among the leading ones in Europe. Together we contribute to the green energy shift where it is easy to live on renewable energy.

Solar energy should account for at least fifteen percent of the total energy use and energy production in Sweden 2030. We believe that this is not an unrealistic goal. It is what is required for the planet and us humans that live on it.

As a platinum member at Svensk Solenergi, you receive all the best that we offer. In addition you receive an increased exposure on our website and in our external communication.

Most people today are aware that the Earth's resources are running out and that the climate is one of the greatest challenges of our time. Solar energy is a renewable energy source that does not run out. Choosing the power of the sun is a step in the right direction for both humanity and the environment.

The choice of solar energy is also economically sustainable due to reduced electricity costs, storage options and self-sufficiency. Our member companies stand for quality and are a given choice when it is time to take the step and install solar energy.

If the information on this home page was not enough to make you apply for membership, have a chat with our CEO, Anna Werner. Here you can schedule a meeting with her.
