## Solar panel charger reviews

The BigBlue SolarPowa 28 proved itself in our testing to be the best option for the majority of people. It managed to perform well across the board and still impressed us with its portability. If you're hoping to get a great model with a reasonable price tag, the X-Dragon 20W is an excellent value.

The Goal Zero Nomad 5 is our top pick if portability is your top priority. This panel is small enough to take backpacking. It's incredibly thin and remarkably durable. Plus, it only weighs 12.35 ounces. This panel weighs less than many larger battery banks that you might otherwise bring on an extended trip so that it could save you weight in your pack. It doesn't fold but is thinner than average and has a single kickstand leg to angle it at the sun. This lets you maximize the efficiency of this 5-watt panel much more easily than with other small solar panels.

Although it's light and folds into a small footprint, the SolarSaga 100 only has a single fold in its design. Because of this, its folded size is significantly larger than some of the other high-wattage panels we examined. This is your panel if you want a high-capacity solar panel that offers excellent overall value for your upcoming camping trip.

Also joining our testing team is James Lucas, a long-time writer, editor, and photographer. As an avid climber who authored the Yosemite Valley Bouldering guidebook, you can find James outdoors more days than not. He spends his time documenting the outdoors and gear testing in Boulder, Colorado, and on frequent travels to California's Sierra Nevada mountains. James frequently uses solar panels to power his adventures and charge his camera gear when working out of his van in the Rockies and when perched atop sunny El Capitan in Yosemite.

We chose the best, most popular, and most promising portable solar panels on the market today to test side-by-side in this review. We tested every model under the same conditions to see which ones provided the most power and which were the most convenient to use. Whether you are looking for a solar setup for car camping or a compact charger to power your smartphone and GPS devices on a backpacking trip, our review offers excellent recommendations for anybody.
