## Solar panels brussels

Firstly, you'll have access to free, green electricity and spend less on electricity. Secondly, you'll also earn income by reselling your green certificates.

Solar panels can be installed on both pitched and flat roofs. The condition of your roof, its orientation, any obstacles and the available surface area all play a part.

Brussels Environment has provided a solar map of the Brussels-Capital Region. By consulting this map, you can see whether your roof is facing the right direction for it to accommodate panels.

Following the installation of the bidirectional smart meter, you will automatically receive a Sibelga certificate. Not received your certificate? You can request one [here](#).

You can find certified fitters of solar photovoltaic systems by consulting RESCert's list. RESCert is an association that manages certification applications from fitters in the country's three regions.

You can also have solar panels installed free of charge, thanks to third-party investors, an initiative that makes solar panel installation even more accessible and affordable for everyone.

Given the low density of solar panels in Brussels, decoupling problems are rare. In most cases, the problems are related to the installation of the photovoltaic system. If you suspect a voltage problem, you can contact us to analyze the situation.

When we from Brusol in the Brussels-Capital Region invest in green electricity (and thus help reduce CO2 emissions), we recoup that investment via the green certificates issued by the Region (although they have been reduced at the beginning of 2023).

All inhabitants of the Brussels-Capital Region benefit. Together, you and we help the Region meet its climate targets. We are also making our capital a little healthier and more environmentally friendly.

You get free solar panels and free electricity that allows you to save a lot on your energy bill (depending on your consumption, from EUR250 to over EUR1,000 per year).

The installation itself is completely free. Brusol takes care of the installation, insurance, replacement of any defective material during 30 years and even the recycling at the end of the life span of the panels. You don't have to do anything, Brusol takes care of everything!

We earn back the investments thanks to green certificates which we sell to energy suppliers. The taxpayer

## Solar panels brussels

does not intervene in this. This allows us to install the systems 100% free of charge.
