## Solar panels for off grid living

Solar panel kits take all the guesswork out of your small-scale solar system by pairing the most efficient panels together with just the right accessories to maximize their potential.

And while it doesn't provide nearly enough power to be able to power multiple appliances, it can easily power phones, laptops, cameras, basic LED lighting, and even a small appliance like a DC refrigerator.

It includes everything you need to mount and wire your system to a battery bank, including highly efficient panels, their latest 40A MPPT charge controller, and all the mounting brackets and wires you need for a basic installation.

The included solar panels only use about half the capacity of the 40A charge controller. In simple terms, if you discover you need more power down the line, you can purchase additional individual panels to increase the total output of your system.

If you are looking for a solar kit that can power an entire tiny home or off-grid cabin that has multiple appliances and requires an ample amount of power, this one won't be enough.

For what it's designed to do, the Renogy 400W Solar Panel Kit is an excellent choice and I can't recommend it enough. It's affordable, easy to install, provides ample power for basic systems, and offers the flexibility to scale as your power needs to grow.

There are a lot of foldable/portable solar panels available these days, but most are targeted at the hiking and camping market rather than RVs, vans, or tiny dwellers.

It's not as powerful as some of the other panel kits on our list, but the incredible amount of convenience it provides earned it a place here. You can literally set it up in under a minute and start receiving power to your batteries as soon as it's plugged in.

It unfolds and can be directed towards the sun using the aluminum kickstands. They make it really easy to track the maximum sun exposure throughout the day and increase overall efficiency.

If you have modest power demands and space is at a real premium, the 100W Foldable Solar Suitcase is a great way to go. And it has unbelievable reviews as well; at the time of writing, it has over 100 reviews and a 4.9 average rating.
