

Solar power saint lucia

Solar power saint lucia

To respond to the energy issues specific to tropical island areas, our teams of engineers and technicians develop and implement innovative and responsible technological solutions.

In recent years, new capacity across the solar value chain has become necessary to support the PV market's growth. However, the capital required to establish and scale-up wafer, solar cell and solar module manufacturing facilities is considerable.

With our innovative technologies, clear focus on the needs of our customers, and 1,210 dedicated employees, we energize society. Let's make tomorrow different today!

Our Solar business now provides the preferred channel to market for some of the world's leading PV manufacturers and our solar professionals work jointly with partners on enhancing product features, lowering lead times and improving cash flow.
