

Solar storage kosovo

Currently there are roughly 10 MW generated through small-scale solar energy projects. More projects are under development and this capacity is expected to increase drastically in the near term. A solar radiation map for Kosovo is available [here](#).

This groundbreaking solar auction ensured a transparent and level playing field for qualifying bidders and is a testimony to growing investor interest in Kosovo's vast renewable energy potential.

The success of Kosovo's first ever solar auction is a prime example of the private sector recognizing a clean energy market opportunity and choosing to contribute to a more sustainable energy future.

By choosing to strategically hold auctions, the Government of Kosovo is seeking competitive renewable energy price setting, lower costs, expanding access to affordable and sustainable energy and increasing the transparency of energy procurement. An auction provides a competitive process for policymakers to procure electricity generated by renewable energy.

Conducted through an open and transparent process, the Kosovo solar auction will offer investors a number of critical advantages, including guaranteed price assurance, streamlined administrative procedures with government agencies, and no land acquisition costs.
