

Solomon islands solar power

Solomon islands solar power

The Solar Power Development Project will install about 2 megawatt of solar power generation capacity with battery storage at the provincial out-stations of Kirakira, Lata, Malu'u, Munda, and Tulagi. The project is funded by grants from ADB and the Strategic Climate Fund, and by funding from the Solomon Islands Government (SIG). The project involves installation of solar-diesel hybrid systems with battery (energy) storage at Solomon Power's provincial power stations to reduce reliance on diesel usage.

The Republic of the Solomon Islands consists of over 1,000 islands inhabited by a total population of 609,883. Approximately 90% of the electricity produced is diesel generated. The one megawatt solar PV plant, which was expanded from 600kW following a grant from the New Zealand Ministry of Foreign Affairs and Trade, bolster energy resilience and reduces costs associated with diesel imports.
