Dr Tony Bittar and Ian Shearer were founding members of the New Zealand Photovoltaic Association (NZPVA) back in the year 2000. As New Zealand's leading solar energy scientist, Tony was appointed first chair of the Board. Ian, who was already part time manager of the NZ Wind Energy Association, was appointed as secretary of the NZPVA. In 2006 NZPVA members decided to change the name to what would eventually become fondly known by industry as the Sustainable Energy Association of New Zealand (SEANZ).

Front End Solar offers high level consultancy services for solar and storage systems integrated with other renewable technologies for on-grid and off-grid requirements. We also provide expertise for cutting edge innovations including microgrids and energy sharing options for communities that wish to explore their energy independence.

Front End Solar provides the highest quality design and installation services for solar and storage systems for both on-grid and off-grid solutions. We adhere to the highest quality and health and safety standards for all our projects. With our level of in-house expertise you can rest assured you will receive the best ongoing after-sales support and system monitoring. Your installation is only the beginning of your solar journey with us as you are in safe hands with our experts every step of the way. Click the button below to get a free quote today!

One of our long term goals is to foster the further adoption of 'behind the meter' innovations where communities produce, store and trade their own energy so that the residual benefits of such activities stay within those energy sharing communities.

Our knowledge hub is a place where you can gain access to relevant information that will help you understand what you need to know about solar energy before making the switch to your renewable energy future.

'Thanks for installing a great system that works well and as per initial indications. Also the added suggestion of future battery bank and easy to add-on solar panels and inverter in future if needed.

-Very prompt and straight forward sales process.-Professional installation within the allocated time.-There to sort out any problem solving or requests post installation.-Very competitive pricing and the amount of panels I got supplied with the package.

'We'd like to thank Front End Solar for the way they implemented our new solar electricity system. They were one of two organisations we shortlisted, based on personal recommendations.

The actual installation took place smoothly, with minimal disruption to other on-site activities. We needed them to do the installation in several stages to fit around other works and were pleased they accommodated it.

The system is now performing as expected. We look forward to the ongoing support as we adjust to being all-electric and seek to optimise the value from the solar system and our new heat pumps for space and water heating.

“My wife and I were really happy with our solar installation from Front End Solar. The main reason we went with them was that we have known Tony and Ian from their many years doing pioneering work in the New Zealand energy sector.

We got quotes from most of the other solar providers and definitely preferred the lowerpressure approach from Front End Solar (and the price was the same). They were very patient with our dithering back and forth between different alternatives and when we finally decided, got the job completed without any hassles.
