

Tesla solar roof bridgetown

Tesla solar roof bridgetown

The third-generation Tesla Solar Roof (aka, the Solarglass Roof) is here. Elon Musk's newest energy-saving shingles were announced in October 2019 and feature a design that looks nearly identical to a regular roof. But how much does a Tesla Solar Roof cost? And where are they available?

The Tesla Solar Roof tiles have a lot to offer. They're designed to blend into your roof while providing renewable power 24/7 in conjunction with a Powerwall battery. They have a warranty of 25 years. Tesla even made a video showing its Solar Roof surviving a two-inch hailstone moving at 100 mph. That's way better than regular old roof tiles hold up.

The Tesla Solar Roof also undercuts the cost of buying a roof and panels separately. Tesla says a 10-kilowatt roof in California will cost around \$33,950, equating to \$5.60 per square foot or \$2.11 per watt. That, Tesla claims, is cheaper than spending \$54,647 on a premium roof (\$34,091 at \$11.92 per square foot) and retrofit solar panels (\$20,556 at \$2.05 per watt).

Tesla Solar Roof tiles were first announced in October 2016, but except for a small number of installations in the spring of 2018 they never seemed to materialize in bulk. Reports at the time suggest installations measured in just the 10s of houses. But Tesla partnered with a Chinese supplier for the third-generation tiles, and previous supplier Panasonic ended its agreement to produce the tiles this week.

At the time of writing, Tesla's website accepts orders for its retrofit solar panels in 24 locations: Arizona, California, Colorado, Connecticut, Delaware, the District of Columbia, Florida, Hawaii, Illinois, Maryland, Massachusetts, Nevada, New Hampshire, New Jersey, New Mexico, New York, Oregon, Pennsylvania, Rhode Island, Texas, Utah, Vermont, Virginia, and Washington.

As for international buyers, there may be some good news on that front. Musk stated on Twitter in February 2020 that he was "looking forward to international expansion later this year."

Arranging an order for the Tesla Solar Roof is simple. Visit the Tesla Solar Roof designer website and enter the information. It can also be accessed at the following address: <https://tesla.com/solarroof>

The first four fields will calculate the roof's price: location, home square footage, number of stories, and average electricity bill. Tesla needs to determine how big the roof will be, how much sunlight it's likely to receive, and how much energy the house uses. The solar roof uses a combination of fake and solar tiles, meaning the roof isn't entirely made of solar panels. These figures will determine the appropriate mix of fake and solar tiles.

The website will inform you that a non-refundable order fee is due today. Curiously, an information box also

Tesla solar roof bridgetown

informs you that "if you feel strongly about this, we'll give it back to you." The pricing breakdown will demonstrate how much the roof will cost after incentives and assuming 25 years" worth of savings. It also offers a comparison with other options like retrofit solar panels.

Once you press "Place Order" to continue, you are agreeing to the "Payment Terms for Services," the "Energy Products Order Agreement" and the "Customer Privacy Policy." The order agreement varies depending on the state, but here are some important details from the California agreement:

Alex Guichet, a games developer based in Cupertino, gave perhaps the most detailed rundown of the installation process for a third-generation Solar Roof. On October 23, 2019, two days before the new product was announced, Guichet signed a contract with Tesla to install the new tiles before they were announced.

Nearly three weeks later on November 11, Tesla confirmed that the installation permit had been secured. Two days later a subcontractor removed their original roof over the space of two hours. Tesla delivered the materials on November 15, and the company's roofing crew completed work on November 22. This included delays from rain and the weekend.
