

United kingdom renewable electricity

The Prime Minister has set out new plans to Build Back Greener by making the UK the world leader in clean wind energy - creating jobs, slashing carbon emissions and boosting exports.

£160 million will be made available to upgrade ports and infrastructure across communities like in Teesside and Humber in Northern England, Scotland and Wales to hugely increase our offshore wind capacity, which is already the largest in the world and currently meets 10 per cent of our electricity demand.

This new investment will see around 2,000 construction jobs rapidly created and will enable the sector to support up to 60,000 jobs directly and indirectly by 2030 in ports, factories and the supply chains, manufacturing the next-generation of offshore wind turbines and delivering clean energy to the UK.

Through this, UK businesses including smaller suppliers will be well-placed to win orders and further investment from energy companies around the world and increase their competitive standing on the global stage, as well as supporting low-carbon supply chains.

The Prime Minister has also set out further commitments to ensure that, within the decade, the UK will be at the forefront of the green industrial revolution as we accelerate our progress towards net zero emissions by 2050.

These commitments are the first stage outlined as part of the Prime Minister's ten-point plan for a green industrial revolution, which will be set out fully later this year. This is expected to include ambitious targets and major investment into industries, innovation and infrastructure that will accelerate the UK's path to net zero by 2050.

Together with planned stringent requirements on supporting UK manufacturers in government-backed renewables projects, these measures will mean the industry can reach its target of 60% of offshore wind farm content coming from the UK.

Today's announcement marks the latest stage of the government's support for renewable energy. Last September the third round of the Contracts for Difference renewable energy auction delivered record-low prices on enough clean energy to power 7 million homes. Earlier this year the government announced the next round would be open to onshore wind and solar projects for the first time since 2015.

The government's plan for renewable energy forms part of wider efforts to ensure the UK meets its legally binding target to reach net zero emissions by 2050 and build back greener from coronavirus.

Fuelling a sustainable economic recovery by reigniting business investment and creating green jobs is the right

United kingdom renewable electricity

response to the challenges unleashed by COVID-19.

We welcome today's announcement from the government which will unlock huge opportunities for world class UK supply chain companies, both domestically and overseas, to market the skills and innovative technologies that have been fostered in the UK offshore wind industry.
