United states energy storage investment trends

U.S. Energy Information Administration: Battery Storage in the United States: An Update on Market Trends. (link is external) National Renewable Energy Lab: Cost Projections for Utility-Scale Battery Storage. (link is external)

Developers expect to bring more than 300 utility-scale battery storage projects on line in the United States by 2025, and around 50% of the planned capacity installations will be in Texas. The five largest new U.S. battery storage projects that are scheduled to be deployed in California and Texas in 2024 or 2025 are:

Battery Storage in the United States: An Update on Market Trends. This battery storage update includes summary data and visualizations on the capacity of large-scale battery storage systems by region and ownership type, battery storage co-located systems, applications served by battery storage, battery storage installation costs, and small ...

With the rise of solar and wind capacity in the United States, the demand for battery storage continues to increase. The Inflation Reduction Act (IRA) has also accelerated the development of energy storage by introducing investment tax credits (ITCs) for stand-alone storage.

As part of the U.S. Department of Energy's (DOE's) Energy Storage Grand Challenge (ESGC), this report summarizes published literature on the current and projected markets for the global deployment of seven energy storage technologies in the transportation and stationary markets through 2030.
