## Ups uninterruptible power supply manufacturers

Protect sensitive electronics and equipment during power surges and blackouts with a UPS System or Uninterruptible Power Supply from our extensive UPS lineup of standby, line-interactive, and double-conversion models. Battery backup capacities range from 350 VA to 10,000 VA. Key features include sine wave output, energy-saving GreenPower UPS(TM) design, data-line protection, and free power management software.

CyberPower Smart App Online rack/tower UPS models, with double-conversion topology provide sine wave output to mission-critical applications and equipment requiring seamless power correction. These units offer generator compatibility and deliver clean AC power with zero transfer time.

CyberPower Medical Grade UPS systems have been designed to power and protect sensitive equipment in hospitals and healthcare facilities. Each medical UPS is UL 60601-1 tested to provide standby power in patient-care settings and comes with hospital-grade plugs and hospital-grade outlets, and a built-in isolation transformer.

CyberPower Ecologic UPS systems, designed with standby topology, offer guaranteed power protection for individual home and small office computer systems. They provide simulated sine wave battery backup power during outages, maintain steady voltage during brownouts and blackouts, and offer surge protection against over voltages and power spikes. Features include a multifunction LCD panel, ECO mode outlets, energy-saving GreenPower UPS(TM) design, data line protection, and management software to easily control and monitor your UPS.

AVR UPS systems from CyberPower, designed with line interactive topology, offer guaranteed power protection for desktop computers, workstations, personal electronics, and home networking/VoIP. They provide simulated sine wave battery backup power during outages, maintain steady voltage during brownouts, and offer surge protection against over voltages and power spikes. Features include Automatic Voltage Regulation (AVR), energy-saving GreenPower UPS(TM) design, data line protection, and management software to easily control and monitor your UPS.

Standby UPS systems from CyberPower, designed with standby topology, offer guaranteed power protection for desktop computers, workstations, personal electronics, and home networking/VoIP. They provide simulated sine wave battery backup power during outages, maintain steady voltage during brownouts and blackouts, and offer surge protection against over voltages and power spikes. Features include energy-saving GreenPower UPS(TM) design, data line protection, and management software to easily control and monitor your UPS.

# Ups   uninterruptible   power   supply manufacturers

CyberPower designs and manufactures a complete line of uninterruptible power supply (UPS) systems to meet the full spectrum of power protection needs from enterprise applications to home office and entertainment systems. Award-winning Backup UPS is ideal for small business and home applications. Safeguard your irreplaceable data and equipment with easy-to-use battery backup from CyberPower.

Optimize the operation of Smart App UPS systems with our CyberPower Hardware products. Our Remote Management Cards (RMCARDS) provide remote management and configuration of a compatible UPS via a standard Web browser or network management system. Our environmental sensor, (ENVIROSENSOR) monitors the status of four connected devices, such as door alarms and security switches. When used with select RMCARDS, the sensor also provides real-time temperature and humidity readings of a datacenter, IT closet, or other critical environment.

CyberPower Gov/Ed/TAA UPS systems and related products comply with standards set by the U.S. Trade Agreement Act (TAA). These TAA products optimize energy efficiency and are listed on the GSA Schedule Contract for approved use in government installations.

The high cost of electricity is not a factor that businesses can afford to ignore when considering their overhead. Every company, no matter how large or how small, must monitor its power use in order to avoid consuming too much. Delta UPSs are known for efficiency and for saving not just energy, but money that would be wasted by less advanced devices that require too much power.

The growth of a business should never be at risk of limitation or delay due to avoidable technical restrictions of existing power hardware. To help companies prepare for increasing success, Delta engineers flexible, scalable systems that are built to be easy to expand as needed, to accommodate greater demands for power protection.

The award-winning UPSs designed by Delta act as advanced power managers, ensuring the availability of an uninterrupted power supply to protect hardware and mission critical applications. High-quality UPSs function as an essential safeguard against many potential energy issues, including voltage surges and spikes, voltage sags, total power failure, and frequency differences. By making sure that their systems are set up to retain access to a stable power supply, even during failure events, companies can greatly reduce their costs while continuing to keep operations running smoothly.
