

Wind power generator for rv

Wind power generator for rv

In recent years advancements in green energy, technology has helped wind generators become more viable for RV use. A high-quality RV Wind turbine that is properly installed and maintained can help with things like maintaining the charge on camper house batteries, power lights, and recharge devices.

You're right to be skeptical, as not all the wind generators sold at the retail level have what it takes to withstand the rigors of RV life. Though there are a few like the Dyna-Living Wind Turbine Generator Kit 400W and the Dyna-Living Wind Turbine Generator Kit 800W that keep proving their viability for RV adventurers.

When you compare them to a solar panel, you need a significant wind generator and just the right wind conditions to equal what a large solar panel of the same size can do consistently.

If you are going to be camping in windy areas like Wyoming, the big sky country of Montana, or West Texas, where the consistent, modest wind is common, you will get more consistent power production, than if you prefer to camp in forested areas.

This also means looking up things like "Gust" potential, as all it takes is one very powerful straight-line wind in the middle of the night to destroy your wind generator investment.

So, if you are going to invest in any sort of green energy power system, like an RV wind generator, then you need to be mindful of overcharging or invest in a device to prevent it.

You can't permanently mount a wind generator on your RV, which means you have to take put it up and take it down every time you set up camp, or fear a wind storm.
